SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	03/14/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/674,152

Applicant(s)

LEI ET AL.

Examiner

Xavier Wong

Art Unit

2609

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE Three MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 - 4 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 - 4 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 September 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 & 2 are rejected under 35 U.S.C. 102(e) as being anticipated by **Cheng (U.S Patent 7,051,104 B1)**.

Consider claim 1, **Cheng** clearly show and disclose a (data communication) system operating in ISDN data link layer protocols Q.921 (LAP-D) and Q.922 (LAP-F) that maintains active (assuming the link layer is still alive) connection between two terminals/access nodes and that all switched virtual circuits (SVC) are still established during a down or re-initialization, which may include a *software* reset (column 5 lines 39-55). Cheng further discloses the exchange of ITU Q.921 and Q.922 request signals (e.g. TEI, SABME, AWAITING_UA/DM, DL-ESTABLISH, DL-RELEASE, etc.) between a data terminal equipment (DCE) and a data communication equipment (DCE) to

maintain a predetermined active call connection state (column 5 lines 26-55 & column 6 lines 25-30).

Consider claim 2, **Cheng** clearly show and disclose a sequence to respond to a DL-ESTABLISH (data link establish) request when a layer 2 device/terminal is down. Upon detection of a down, a device (switch A 110) will continue to assume that the link layer is still *active* and all the switched virtual circuits (SVC) that are previously (primitive) established were never released and still in operation (column 5 lines 39-55); therefore, a stable connection is preserved. The device/terminal performs a "sets layer 3 initiated" step to maintain layer 2 connection with layer 3 active as if *no disconnection* has ever occurred; and operated in a Q.922 (LAP-F) and Q.921 (LAP-D) in a layer 2 environments (column 5 lines 39-55, column 6 lines 15-30 & column 7 lines 57-62).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 2609

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3 & 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Cheng (U.S Patent 7,051,104 B1)** in view of **Hatta (U.S Patent 5,506,839)**.

Consider claim 3, **Cheng** disclose the claimed invention except an RNR signal being transmitted to terminal equipment.

In the same field of endeavor, **Hatta** clearly show and disclose an RNR signal transmission begins after the detection of a congestion notification bit being set to 1 to a data terminal equipment (column 5 lines 36-51 & column 10 lines 10-20; figs. 2c, 4 & 9).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to incorporate the teachings of transmitting an RNR signal to a terminal equipment as taught by **Hatta**, in the system of **Cheng**, in order to detect a congestion is taking place.

Consider claim 4, **Cheng** clearly show and disclose the claimed invention except the software reset means comprise the disabling of the RNR signal transmission in response to completion of execution.

Hatta further disclose in the recovery (a reset) steps, a terminal equipment, via a terminal adapter, learns the recovery occurrence by using a congestion notification bit in a control field of a register and a selector will select either RNR or Ready Receive (RR) signals (column 2 lines 51-60 & column 3 lines 35-55); in other words, only either RNR or RR signal can be transmitted at a certain timeframe (column 7 lines 62-66 & column 8 lines 1-7, 60-67; fig. 9). Therefore, when RR signal is being transmitted to the terminal equipment, RNR signal is disabled for transmission.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to incorporate the teachings of disabling an RNR signal transmission in response to completion of a reset/recovery as taught by **Hatta**, in the system of **Cheng**, in order to begin data transmission without fault as soon as possible.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

A.) **Ericson et al (U.S Patent 5,748,628)** mention a discriminator to identify and process signals on ISDN D-channels from Layers 1, 2 or 3 in order to establish a communication link.

B.) **Oono et al (U.S Patent 5,548,710)** mention ISDN rapid recovery method during communication troubles without making the other party of communication conscious of the troubles by resuming communications (of LAP-D frames) using a stand-by communication adapter before the recovery of the main adapter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Xavier Wong whose telephone number is (571) 270-1780. The examiner can normally be reached on Monday through Friday 8 am - 5 pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rafael Perez-Gutierrez can be reached on (571) 272-7915. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Art Unit: 2609

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at (866) 217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call (800) 786-9199 (IN USA OR CANADA) or (571) 272-1000.
